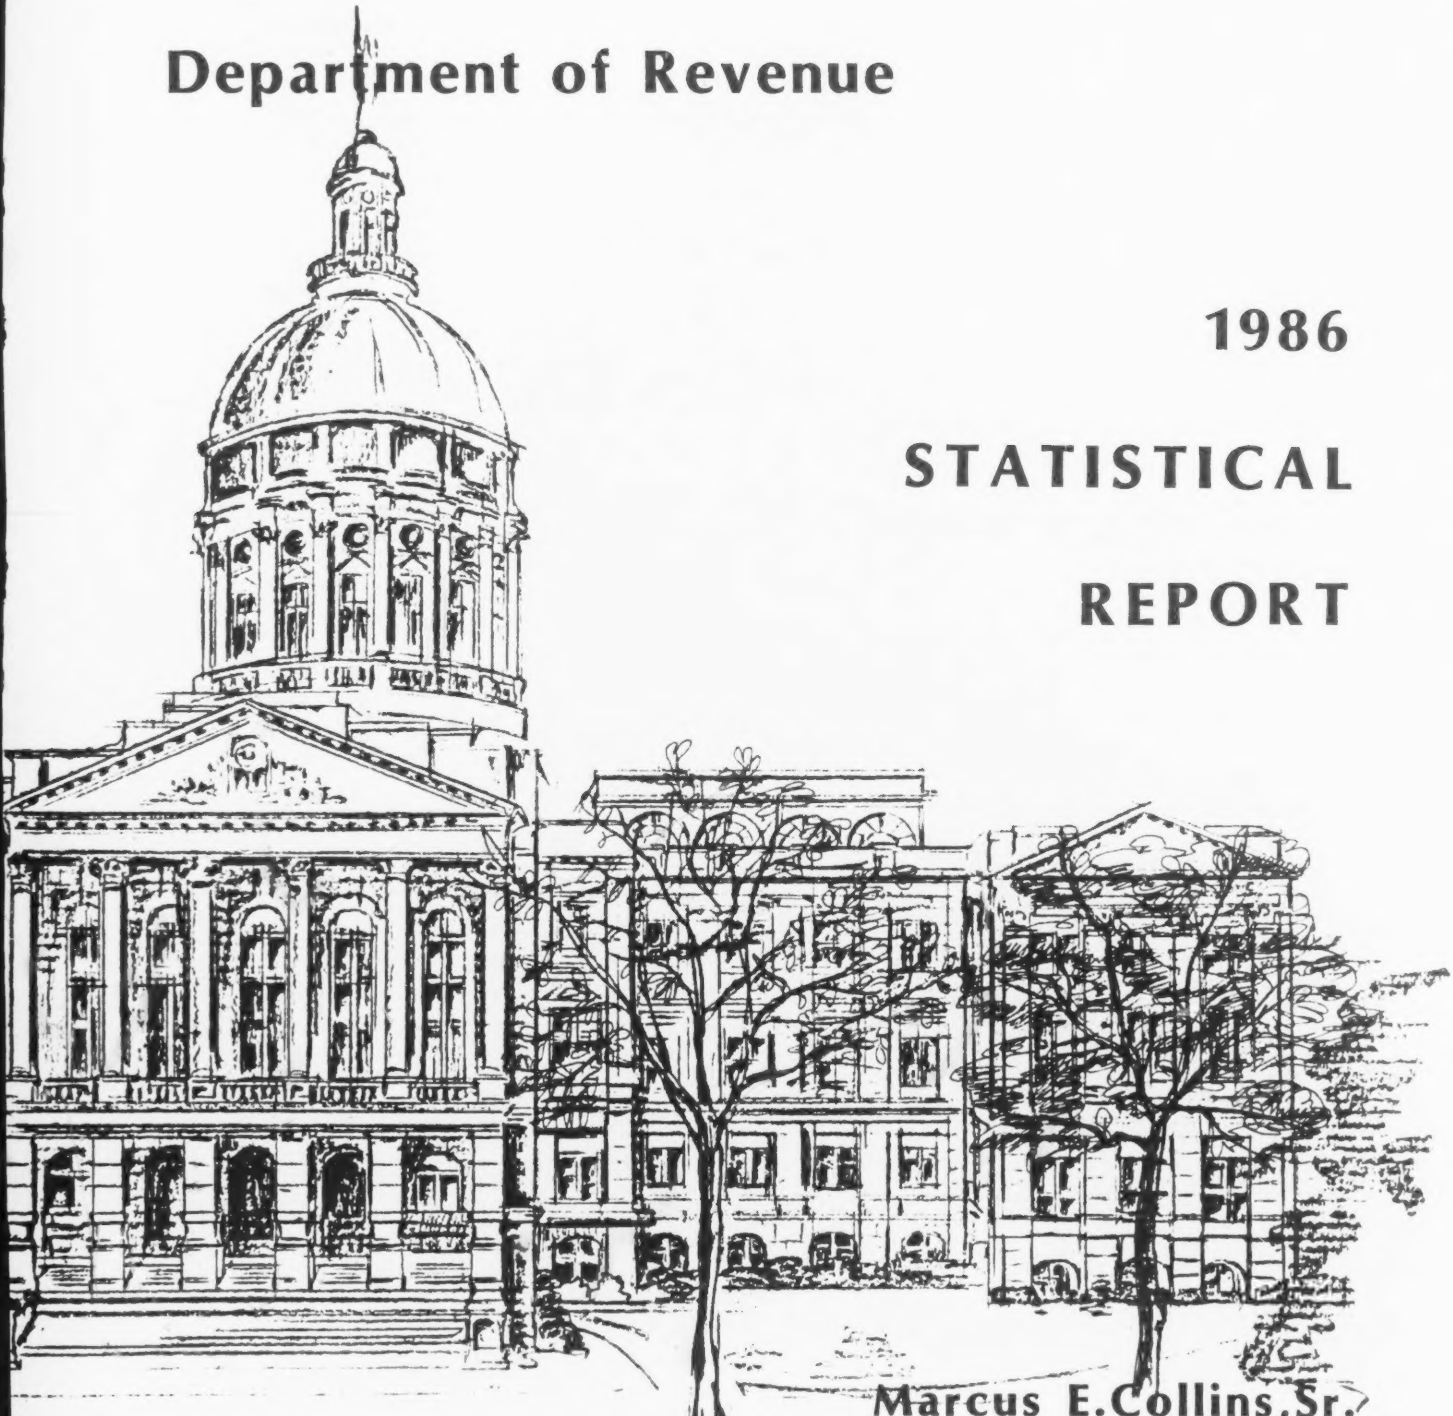
STATISTICAL

REPORT



Marcus E. Collins, Sr.

Revenue Commissioner

1776

Department of Revenue
State of Georgia
Atlanta 30334

Marcus E. Collins, Sr.
Commissioner

December 31, 1986

The Honorable Joe Frank Harris, Governor
and
Members of the General Assembly
State of Georgia
Atlanta, Georgia 30334

Governor and Members:

As required by law, I herewith submit to you the Statistical Report of the Department of Revenue for the fiscal year ending June 30, 1986.

Net collections for the fiscal year ending June 30, 1986, totaled $4,739,023,189.28 which was a $365,051,587.55 increase over the previous year. Both of these figures were slightly less than expected primarily because the rate of inflation was well below the consensus of forecasts.

The goal of this Department is to provide for Georgia the fairest and most efficient Revenue Department in the country. Our continuing progress toward achieving this goal is directly attributable to the dedicated and quality work performed by our employees and the excellent cooperation we receive from you, your respective staffs, and our associated agencies.

Respectfully submitted,

Marcus E. Collins Sr.

Marcus E. Collins, Sr.
Commissioner

MEC/et

An Equal Opportunity Employer

FOREWORD

Tax Data Available by County

Personal income tax returns have been tabulated by county and are shown on pages 24, 25 and 26 in Table 12. Table 13, beginning of page 27, shows sales and use tax collection with a growth index; assessed property value of the gross general digest, net general digest and public utility digest; and motor vehicles by major type. Table 14, beginning on page 32, presents the counties by population and the size or magnitude ranking using income, sales, motor vehicle, and property digest information found in the two preceeding tables. The four right hand columns give each county as a per capita amount so an alternate method of comparison can be made.

Tables 16 and 17 on pages 39 and 40 list the property tax millage rate by county in an alphabetic and numeric series. The alphabetic table 16 gives the reader a quick access to a given county's millage rate. Table 17 gives the reader a quick method of comparing a given millage rate numerically with the other counties.

Table 18 on page 41 displays the gross intangible tax assessment by county.

The Revenue Department research staff will furnish various statistics in line with present unpublished data not subject to disclosure law confidentiality.

Taxes administered by the Revenue Department:

SALES AND USE TAX

The Sales and Use tax was begun in March, 1951, in Georgia at the present 3% statewide rate. Georgia was the 30th state to use this tax source and there are presently 45 states using it. This tax has been one of the largest state revenue sources since it was adopted and presently produces one-third of the state-generated tax revenue.

An additional 1% was added in Fulton and DeKalb Counties as a dedicated revenue for the construction and operation of the Metropolitan Atlanta Rapid Transit Authority. More than one hundred and forty seven million dollars were collected for M.A.R.T.A. in the past fiscal year by the Revenue Department. A 1% Local Option Sales Tax also generated three hundred and ninety million dollars in revenue for 133 county governments, 374 municipal governments and nine county school districts during the past fiscal year.

A special 1% Sales Tax began July 1, 1985 and produced ninety two million dollars for 26 county government participants during the past fiscal year.

The Sales and Use tax has been a consistent revenue source with only minor changes in the law since its inception. About 80% of the Georgia Personal Income is represented in the collections of this tax each year. Although this is an overall proportional tax, most people agree that it is slightly regressive in that lower income households spend a larger percentage of their income on items subject to the sales tax than do higher income households.

Sales and Use tax is shown by:

Commodity	pages	15, 16

County ranking, sales dollars	"	32, 33, 34, 35, 36, 37
Total Collections	"	1, 7, 8, 9, 10, 31

INDIVIDUAL INCOME TAX

The individual income tax was initiated in 1929 and for two years was assessed at one third of the federal rate. A graduated system was begun in 1931 and revised in 1937 to essentially the present graduated scale used by the Georgia joint filer today. Several refinements such as withholding, estimated tax, and new graduated schedules for certain types of filers have been introduced over the years.

This tax, unlike sales and motor fuel, was handicapped at creation and only allowed to tax the affluent incomes. The basic allowance (exemptions and deductions) relieved all but a small percentage of the Georgia families from paying state income taxes. With the inflationary rise of income, the basic non-taxable income allowances become a smaller percentage of this income so that today two-thirds of the Georgia families pay state income taxes.

Families with annual incomes below $6,000 do not owe personal income taxes and those above this level are subject to the 1% to 6% graduated tax scale. The 1984 returns show that 47% of the average Georgian's income was subject to an average 4.8% rate of income taxation for an effective tax rate of 2.3% of total personal income The 1964 effective tax rate was less than 0.7% with only 25% of the average Georgian's income being subject to a 2.7% average rate of taxation.

The individual income tax is considered to be "levered" because it changes 1.6 times the change of income activity. This leverage is shown as an "Income elasticity ratio" in the last column in Table H-4 on page 10.

Personal income tax information is shown by:

Charts	"	7, 9

MOTOR FUEL TAX

The Motor Fuel tax is the oldest major State tax presently in use. Georgia was one of ten states that adopted this tax source in 1921. Five states had initiated the use of Motor Fuel taxation in 1919 and 1920. All states (48 back then) began motor fuel taxation by 1929 and this was the largest state tax in Georgia and most other states until after World War II.

The motor fuel tax rate was increased by one cent a gallon in June, 1971, to 7½ cents for the first change in 16 years. A rate of 7 cents per gallon was in effect in January, 1950, so that in 30 years the rate has increased less than 8%.

After being the state's top revenue source for three decades, the new 3% sales tax pushed motor fuel back to number two during the 1950's and 1960's. The individual income tax, with its graduated scale and aided by an inflationary rise of incomes,finally relegated motor fuel to the number three position in the 1970's. In spite of its less lofty position on the team, this hard-working motor fuel tax generates as much state revenue today as the whole tax system could produce in the early 1950's.

Motor fuel taxes are presented on pages 1, 7, 8, and 18.

CORPORATE INCOME TAX

The corporation income tax was initiated in 1929 and for two years was assessed at one third of the federal rate. The rate was changed to: 4% in 1931; 5½% in 1937; 7½% in 1949 - 50 (temporarily); 5½% in 1951; 4% in 1955 with Federal taxes no longer deductible; 5% in 1964; and the present 6% went into effect in 1969.

The corporation income tax has been a major tax source since its inception by the state. It has been the fourth largest state revenue producer for over two decades. The battle for third largest state revenue producer has been won by the corporation income tax in four of the last six fiscal years over the old reliable motor fuel tax. A corporation license (or franchise) tax is administered in conjunction with the income tax program. Pages 1, 7, 8, 9, 10 and 36 show collections from corporation income tax and licensing.

TOBACCO TAXES

The taxation of cigars and cigarettes was begun in 1923 by Georgia. The rate on cigarettes had gradually increased to 5 cents a pack by 1955, in 1964 it was raised to 8 cents, and in March, 1971, to the present 12 cents a pack. Most states have increased cigarette taxes rapidly in the last 15 years so the Georgia rate has remained approximately average. The revenue from this tax is under 2% of the Department's collections and almost equals the combined state collections of liquor and beer. Pages 1, 7, 8, and 20 show detailed cigarette collection data.

LIQUOR,BEER AND WINE TAXES

The sale of alcoholic beverages was begun in the mid 1930's after Prohibition was repealed nationally. The local option concept prevails in Georgia in the licensing and sale of alcoholic beverages. This means that any city or county which wants to provide for the licensing of distilled spirits can do so only after holding a public election, to determine whether the citizens want it. If they don't, then the question is dropped for two years at which time another election may be held. If the vote indicates that the citizens do want to license the sale of spirits in their area, then sale and manufacture in the area is permitted, provided the manufacturer, wholesaler, or retailer has obtained a current valid license from the State Revenue Department, after obtaining all necessary licenses from the city or county in which the licensee will have his place of business. Alcoholic beverage collections are shown on pages 1, 7, 8, and 20.

MOTOR VEHICLE TAGS AND TITLES

The motor vehicle license law was initiated in 1910 and a title law was added in 1963. A title is to a motor vehicle what a deed is to a piece of real estate. The law requires you to secure a title at the time your vehicle is purchased.

Non-residents who move to Georgia permanently, as opposed to those who are merely sojourning, must purchase a Georgia tag within seven (7) days after establishing their residence in Georgia. Persons employed on a temporary basis in Georgia or just passing through are not required to register their vehicles if they remain in the state for less than 30 consecutive days. Military personnel are not required to register vehicles in Georgia as long as they display valid licenses from their home states. However they may purchase Georgia plates if they wish. Out-of-state students may use vehicles in Georgia without purchasing a Georgia tag, provided they display valid licenses from their home states.

Application for tags and/or decals for all vehicles, and payment for ad valorem taxes on the vehicles are made through the county tag agent. The county tag agent is the county tax commissioner or tax collector. The county tag agent issues all the tags or renewal decals except those for certain large trucks. These are issued by the Department of Revenue. Applications for title may be submitted to the county tag agent or to the Department of Revenue.

Each license tag application must be filed in the county of legal residence of the person who owned the vehicle on January 1. If the vehicle is used in connection with some established business enterprise located in another county, the license application must be filed in the county where the business is located. Motor vehicles owned by non-Georgia residents must be registered in the county where they are located.

By law, the tax collector or tax commissioner of each county is charged with the duties of tag agent. Any inquiries or needs concerning motor vehicle registration and licensing should be directed to the tag agent in your county. Application for a renewal decal on an existing tag must be made between January 1 and April 1 each year - the earlier the better. Motor vehicle information is shown on pages 1, 7, 8, 21, 27, 28, 29, 30 and 31.

PROPERTY TAX

The Property Tax Division oversees all forms of taxation with respect to real property, personal property, utilities, automobiles, intangible property, real property recording, property abandonment, and intangible property recording.

The ad valorem property tax is the primary source of revenue for local governmental units in Georgia, including cities, counties, and school districts. In addition, a small amount of property tax revenue goes into the State Treasury. County and city tax officials collect and administer the tax, but the State Revenue Commissioner exercises some supervisory authority to assure that the tax is administered uniformly throughout the state and in accordance with the law.

The ad valorem tax is based upon the "value" of the real and personal property which is subject to the tax. The tax rate, or "millage", in each county is set annually by the Board of County Commissioners or other governing authority of the taxing jurisdiction. A tax rate of "one mill" represents a tax liability of $1 per $1,000 of assessed value. The average county millage rate in 1985 was under 25 mills; the amount collected for the State in each county was only 1/4 of a mill. Pages 1, 8, 22 and 23 show collections from property taxation. Additional related property information is shown on county tables beginning on page 27.

UTILITIES

The ad valorem tax on public utilities is a centralized system operated by the Property Tax Division of the Revenue Department. There are 172 utility systems consisting of: 23 Railroad, 43 Telephone, 53 Electric, 2 Gas, 24 Municipal Gas, 6 Pipeline, and 21 Airlines Flight Equipment. Four basic factors are reviewed in arriving at assessment of utilities: Fair Market value of the System, Fair Market value in Georgia, Net Book Value, and the Average Income.

ORGANIZATION OF THE DEPARTMENT OF REVENUE

In addition to the offices of State Revenue Commissioner and Deputy Revenue Commissioners, the principal organizational unit of the Department of Revenue is the "Division." The Department is currently organized into eight divisions with the following functions:

CENTRAL AUDIT

Utilizes a staff of professional tax specialists to audit tax accounts (Income, Sales, Motor Fuel and Alcohol). Audits are performed both within the State and throughout the Nation.

ELECTRONIC DATA PROCESSING

Maintains and enhances computer application programs and systems for all areas of tax administration of the Revenue Department. Develops new application programs as requested.

Provides primary data entry support for the individual income and intangible tax systems. Provides data entry back-up support to other tax systems.

FIELD SERVICES

Provides taxpayer information and assistance at nine regional office locations. Continuously examines taxpayer registrations, compliance with filing deadlines, and collects all delinquent accounts

Enforces all laws and regulations pertaining to the manufacture, possession, transportation, and sale of legal and illegal alcoholic beverages within the State. The Division is charged with licensing the sale of distilled spirits, malt beverages, wine, cigars, and cigarettes. It also has the responsibility for enforcing the Motor Fuel Tax laws. A criminal investigative staff performs specialized investigations, to include investigations to keep organized crime and other persons of bad character out of the industry in cooperation with other state and local enforcement agencies.

INCOME TAX

Administers the Income Tax laws imposed on net income of individuals, fiduciaries and corporations; administers the Corporation Occupation or License Tax. Issues regulations pertaining to Income Tax and manages all taxpayer protests and hearings.

INTERNAL ADMINISTRATION

Provides supporting services to other Divisions of the Department. Included are centralized processing cashiering and accounting activities, procurement and records management, mail handling, supplies and other support functions.

MOTOR VEHICLE

Issues license tags and certificates of title and records liens and security information on all vehicles registered in the State of Georgia. Provides information on all vehicles for local and state enforcement agencies.

PROPERTY TAX

Administers all laws and regulations with respect to Property Tax. This Division is charged with the overall supervision of the Ad Valorem tax including the approval of all county tax digests, the assessment of all public utility property, the preparation of the assessment manual for motor vehicle property and the administration of county property revaluation programs. This Division also administers the Intangible Tax, and the Real Estate Transfer Tax. Also this Division administers laws and regulations as set forth in the Unclaimed Property Act.

SALES AND USE TAX

Administers all laws for Sales and Use Tax. Issues regulations pertaining to Sales and Use Tax and manages all taxpayer protests, exemptions and hearings. Also administers the 1% MARTA and Local Option Sales Tax; separately accounts for the 3% sales and use tax on motor fuel.

Administers all laws for Motor Fuel Tax, Motor Carrier Fuel Tax, and Highway Use Tax. The Unit is charged with licensing Motor Fuel distributors and permitting motor carriers. Also, the Unit issues regulations and manages all taxpayer protests and hearings pertaining to Motor Fuel laws.

REVENUE HIGHLIGHTS FOR THE FISCAL YEAR ENDED JUNE 30, 1986

Collections by the Department of Revenue for the fiscal year totaled $4,739,023,189 for State purposes. This was an increase of $365,051,587 or 8.3% over the previous fiscal year. In addition, the Department's Sales and Use Tax Division collected $630 million for distribution to MARTA, Local Option and Special Purpose County Districts.

Commissioner Marcus E. Collins, Sr. was the recipient of the 1986 State Government Service Award presented by the Georgia Municipal Association. Commissioner Collins was presented the award at the Association's recent annual convention in Savannah for his service to cities. The award is the highest Honor the Association bestows in the area of state government.

At the beginning of the fiscal year on July 1, 1985, two changes became effective in the Sales and Use Tax Act. The exemption of prescription drugs, eyeglasses and contact lenses reduced sales tax revenue approximately fifteen million dollars or almost one percent of total state sales tax collections. A Special one percent local tax was added to the complex Sales and Use Tax reporting system. The maximum combined rate of the general Sales and Use Tax Act is five percent, of which three percent is the statewide rate. No more than two percent from other sales taxing districts can be added at the sub-state level.

The scope of the Georgia Sales and Use Tax Act has expanded dramatically in the last fifteen years. Only minor adjustments to the Sales Tax system were made over the first twenty one years from March, 1951 to April of 1972. On April 1,1972, a one percent MARTA tax was implemented in Fulton and DeKalb counties. Collections of the MARTA tax show that about 25% of the transactions subject to the State three percent sales tax are in the MARTA tax jurisdiction.

The Local Option Sales Tax began on April 1, 1976. Collections of this tax for the first full fiscal year of operations in FYE 1977 indicate the tax began in counties comprising 18% of the statewide sales tax base. None of the larger metropolitan Atlanta counties adopted the Local Option Sales Tax during the first year. In fiscal year 1986, there were a total of 140 counties with a Local Option Sales Tax levy. These 140 counties effectively taxed 68% of the statewide sales tax base in 1986.

The Special Sales Tax began July 1, 1985, when it was implemented in Cobb County. Several counties have levied tax in the succeeding calendar quarters and by the end of FYE 1986 a total of twenty-six counties were utilizing the Special Purpose Sales Tax. The increase in the number of counties adopting the Special Sales has shown a growth rate similar to that of the early growth period of the Local Option Sales Tax. Tax collections for the Special tax equalled 16% of Statewide sales tax base during the first year and will easily reach a rate of more than 32% of the system base during the current fiscal year.

EFFECTIVE TAX RATE OF MARTA, LOCAL AND SPECIAL SALES TAX SYSTEMS

FYE	M/L/S RECEIPTS	MARTA	LOCAL	SPECIAL	SUB-TOTAL	STATE TOTAL
1973	$ 38,745,249	.24CENT			.24CENT	3.24CENTS

Liquor dealers, licenses		436,350.00	375,125.00	436,850.00
Beer dealers, licenses		749,975.00	719,825.00	743,350.00
Cigar and cigarette dealers, licenses		9,850.00	12,530.00	11,400.00
Wine dealers, licenses		534,725.00	519,825.00	561,175.00
Motor fuel distributors' fees		6,970.00	7,505.00	8,425.00
Contractors fees		5,110.00	4,960.00	3,300.00
Property transfer fees		80,907.93	94,250.97	120,477.00
Local Sales Tax 1% collection fees		4,437,572.30	4,928,199.95	6,362,756.55
Other collections		9,088,520.86	9,753,621.29	12,288,181.36
OTHER TAXES OR FEES		15,349,981.09	16,415,842.21	20,535,914.91
TOTAL NET REVENUE COLLECTIONS		3,818,550,405.04	4,373,971,601.73	4,739,023,189.28

(1) Commissions authorized by law for collecting and assessing totaled $51,287,195.18 in FYE 1984, $56,638,476.89 in FYE 1985 and $59,799,574.39 in FYE 1986. Refunds paid through the Department of Administrative Services totaled $355,831,370 in FYE 1984, $356,687,207.01 in FYE 1985 and $394,883,415.12 in FYE 1986.

(2) Amounts for motor carrier fuel (mileage) tax are included in "motor fuel taxes" amounts shown in Chart 1.

(3) Total excludes accounts receivable (law allows the purchase of certain tags on a quarterly installment basis).

(4) Total includes Motor Fuel Sales Tax of $103,744,666.27 in FYE 1984, $103,655,198.05 in FYE 1985 and $102,108,104.28 in FYE 1986.

CHART 2. TEN-YEAR TREND IN GEORGIA'S TOTAL STATE TAX REVENUES BY MAJOR SOURCE
(Fiscal year ended June 30 of year shown)

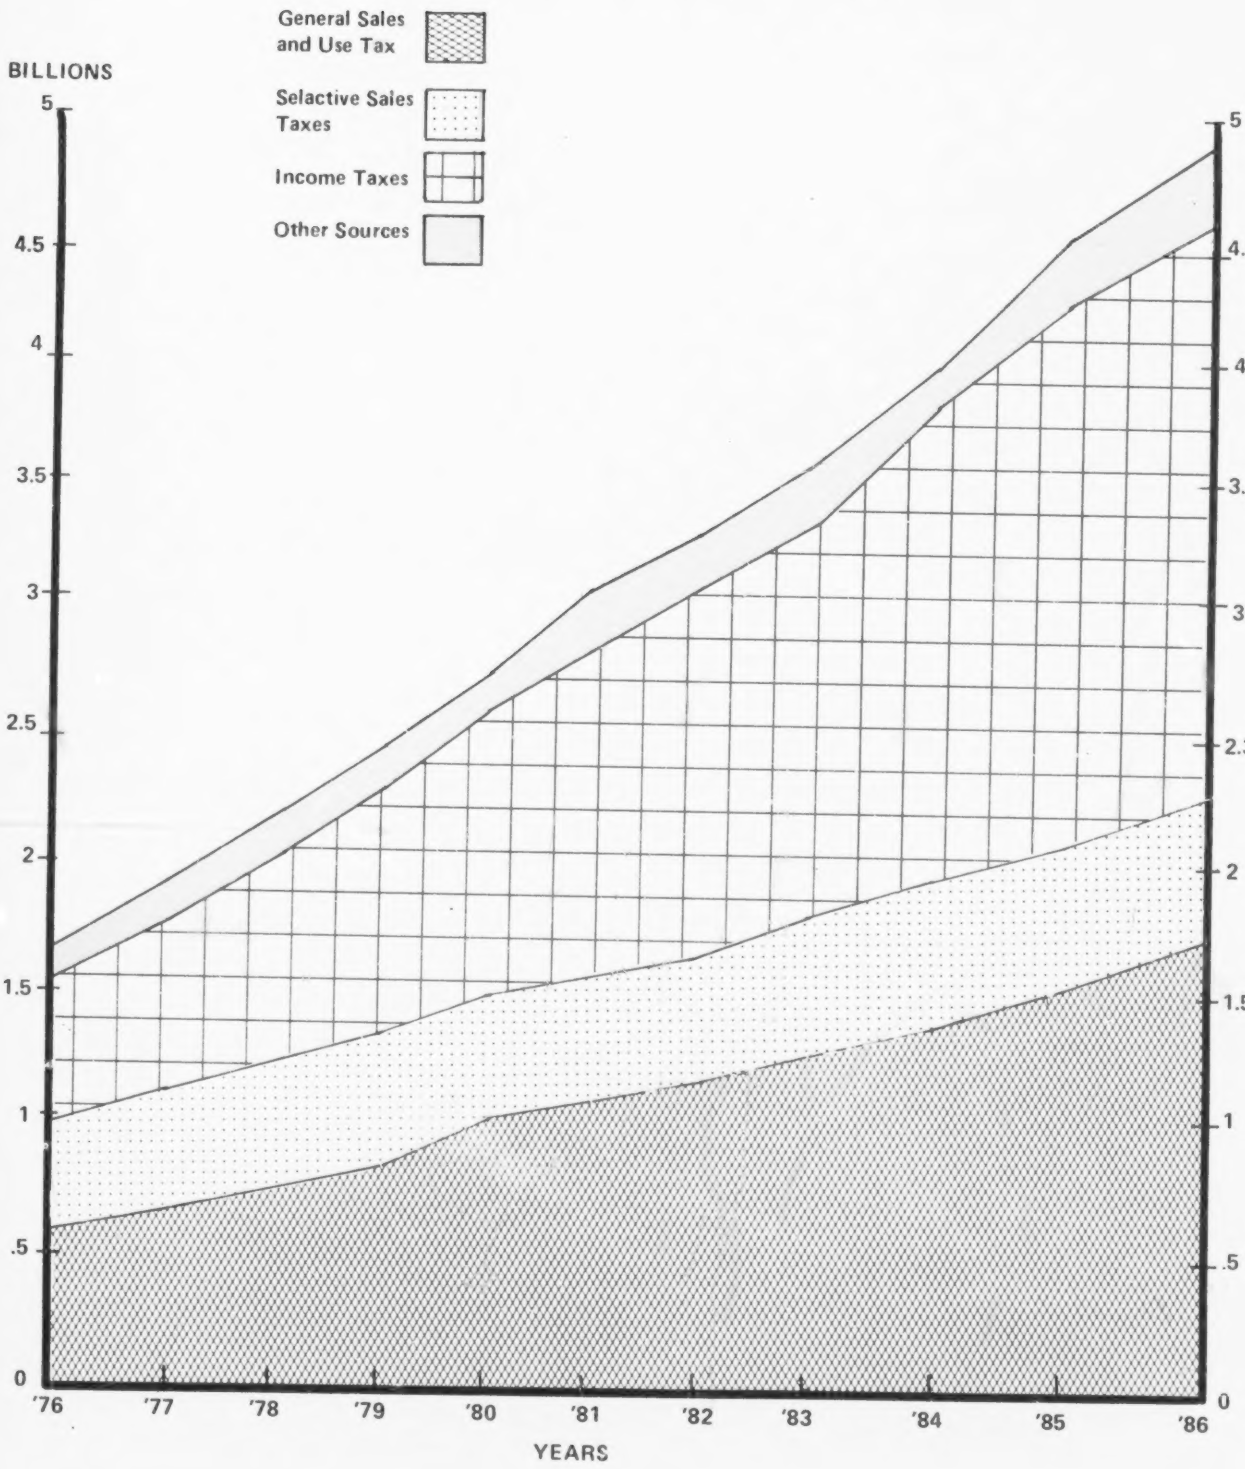

TABLE H-3.—TREND IN GEORGIA'S TOTAL STATE TAX REVENUES BY MAJOR SOURCE 1976 — 1986

(Millions of dollars)

Fiscal Year	Department of Revenue	Other Agencies	Grand Total (1)	Breakdown of grand total by major source			
				General Sales and use	Selective Sales Taxes	Income Taxes (2)	Other Taxes or Fees
1976	1,607	65	1,672	619	425	546	82
1977	1,826	75	1,901	686	446	673	96
1978	2,094	85	2,179	791	480	807	100
1979	2,354	89	2,443	892	497	955	99
1980	2,625	97	2,721	1,006	497	1,112	106
1981	2,911	103	3,014	1,108	497	1,289	120
1982	3,162	114	3,276	1,189	503	1,451	133
1983	3,389	110	2,499	1,271	507	1,581	140
1984	3,819	126	3,945	1,461	537	1,780	167
1985	4,374	142	4,516	1,633	568	2,134	181
1986	4,739	157	4,896	1,735	591	2,358	212
1976	96.1%	3.9%	100%	37.0%	25.4%	32.7%	4.9%
1986	96.8%	3.2%	100%	35.4%	12.1%	48.2%	4.3%

(1) Because of rounding, detail may not add to totals; percentages computed from unrounded figures.

(2) Since January 1966 corporation license taxes have been reported on a combined form with corporation income taxes and, because of reporting errors, a precise separation is not available.

TABLE H-4. — COMPARATIVE TRENDS IN GEORGIA'S PERSONAL INCOME AND STATE INCOME TAX RECEIPTS, 1970 TO 1986

Fiscal Year ending June 30 (1)	Total personal income		Personal income tax receipts		"Income elasticity ratio" (2)
	Amount (millions of $)	Change from prior year (%)	Net amount ($1,000)	Change from prior year (%)	
1970	14,338	12.4	164,553*	18.2	1,468
1971	15,453	7.8	183,353	11.4	1,462
1972	16,613	7.5	232,785	27.0	3,600
1973	18,761	12.9	285,091	22.5	1,744
1974	21,157	12.8	340,705	19.5	1,523
1975	23,156	9.4	373,454	9.6	1,021
1976	24,734	6.8	413,188	10.6	1,559
1977	27,576	11.5	495,616	20.0	1,739
1978	30,358	10.1	604,084	21.9	2,169
1979	35,324	16.4	729,479	20.8	1,268
1980	39,773	12.6	872,836	19.7	1.563
1981	45,812	15.2	1,037,181	18.8	1.237
1982	51,871	13.2	1,181,832	13.9	1.053
1983	55,935	7.8	1,342,051	13.6	1.744
1984	61,263	9.5	1,466,066	9.2	.968
1985	68,910	12.5	1,718,317	17.2	1.376
1986	74,960	8.8	1,944,294	13.2	1.500

*Excludes "windfall" of $20,462,636 to keep from distorting series in 1970 and $7,110,000 in 1972.

(1) Personal income amounts are for immediately preceding calendar year.

(2) Ratio of the percentage change in tax receipts to percentage change in personal income. This is a measure of the sensitivity of personal income tax revenue to changes in personal income. A ratio of 1,000 would indicate identical rates of change for income and tax yield.

TOTAL	1,551,968,622	163,539,123	190	218	233	160	197	202

*Adjusted gross sales tax receipts relate directly to taxable sales in Georgia by Georgia firms. Gross use tax receipts relate directly to taxable purchases by Georgia firms from suppliers outside Georgia. The above tax amounts represent three percent of gross taxable sales (or purchases), with adjustments for vendors compensation paid, penalty and interest payments, refunds, returned checks, overpayments, and underpayments.

TABLE 3 – GROWTH TREND OF PERSONAL INCOME TAX

Year of Earnings	Number of Returns	Adjusted Gross Income Reported	Taxable Income Reported	Tax Liability

•Indicates Prior Years General Property Digest Amounts.

(1) Multi-store sales tax returns were analyzed in calendar year 1967. This study established that these chain stores operated mostly in the larger trade centers. Multi-stores accounts collect approximately 35% of the total sales tax and this has been distributed as accurately as possible to the county of origin of store locations. Estimated distribution by county of receipts from February 1985 through January 1986 corresponds to business activity of January - December 1985 Adjusted gross use tax receipts relate directly to taxable purchases by Georgia firms from suppliers outside Georgia. The above tax amounts represent 3% of gross taxable sales (or purchases) without adjustment for vendors' compensation paid, penalty and interest payments, refunds, returned checks, overpayments and underpayments. The county estimates indicates place of sale rather than "consumer buying power" by place of residence. "Other" includes contractors and other categories not distributed by county. County estimates for years before 1967 are not directly comparable with the estimates for 1985 Sales tax adjustment made in 1975 for multi-store allocation by county for greater reporting accuracy.

(2) Net Digest amounts reflect state homestead exemption requirements only. Some counties have expanded homestead exemptions for local taxing purposes.

Joe D. Tanner, Commissioner

STATE RECORDS HEALTHY GROWTH IN 1986

Nonagricultural wage and salary employment in the state of Georgia grew by 107,600 (4.1%) from December 1985 to December 1986. As in previous years, the largest gainers were the services and trade industries.

Wholesale and retail trade rose 39,600, edging out services as the largest gainer. Approximately one in every four nonagricultural wage and salary jobs is in the trade industries. Although the retail sector is considerably larger than the wholesale trade industries, the rate of increase was relatively proportionate. Wholesale durable goods grew by 7,300 jobs (5.8%), and wholesale nondurable goods rose 3,700 (5.4%). An increase of 28,600 jobs (6.0%) was recorded in the retail sector. The greatest growth (13,200) was recorded in eating and drinking places. Food stores employment rose 5,500; department stores, 5,400; and auto dealers and service stations, 2,300.

Services was second with an increase of 37,700 (7.8%). Although the increment was shared by almost every segment of the division, business services reflected the largest increase, largely because of the proliferation and growth of computer services. Health services also rose by a healthy margin, although growth in hospital employment played a much smaller role than in some past years. This appears to reflect the

(Continued on the following page)

Revised Estimates for 1985-1986 in this Issue

If any of our subscribers wish to receive December 1986 estimates on first quarter 1985 benchmark, they are available by request to this office.

In Cooperation with the U.S. Department of Labor's Bureau of Labor Statistics and Employment and Training Administration

trend toward shorter hospital stays and more outpatient treatments and home health care which has been brought about by curtailed insurance coverage, especially by Medicare. Employment in hotels and motels rose by 4,000, a testimonial to the health of Georgia's convention and tourism business.

The growth of 12,900 in contract construction occurred largely in special trades contracting, which is primarily inside finishing work. General building, which includes both residential and industrial building, gained 2,900. Gains in heavy building, which includes road building, were only slightly less.

Employment in finance, insurance, and real estate rose 9,800 (7.0%). More business in banks, credit agencies, and other financial institutions and in insurance agencies accounted for most of the growth. Real estate rose more modestly.

Government employment rose by 5,600 (1.2%), all of it in the state and local sectors. State and local education rose by 700 and 1,300 respectively. Other local government gained 2,000, and other state government, 1,600. A decline of 800 in federal defense establishments was completely offset by an equal gain in other federal government.

Transportation, communication, and utilities rose 1,500 (0.9%). The greatest growth occurred in motor freight warehousing, telephone communication, and public utilities.

Mining gained 700 jobs, which was an 8.5% increase from December 1985.

The loss of 100 jobs in manufacturing at the division level in no way reflects the many internal fluctuations within the division. At 104,900, textile employment was at its highest level since September 1984. Floor covering mills gained 900, and yarn and thread mills was not far behind with 800. The remaining segments had modest gains, except broadwoven cottons which lost 100. Printing and publishing rose 2,000, fueled mostly by more business in newspapers and other commercial printing. Small gains of 100 - 600 occurred in stone, clay, and glass; electric and electronic equipment; transportation equipment; "other durable goods"; and paper and allied products.

The largest loss in the manufacturing industries occurred in "other nondurable goods," the result of the closing of the Firestone plant in Albany. Primary metals dropped 1,200 because of less business in iron and steel mills and smelting, nonferrous foundries. Declines in drugs, soaps, paints and varnishes, and miscellaneous chemicals led to a loss of 900 in the chemical industry. Machinery, except electrical, decreased by 700 because of less business in firms manufacturing construction, metal-working, and service industry machinery. Less business in metal stamping caused a drop of 500 in fabricated metals. The apparel industry declined by 900 jobs; the decreases were scattered throughout, but the largest was in women's and children's clothing. A drop of 700 in lumber and wood products was caused by less business in millwork, mobile homes, and prefabricated wood products. Less business in office furniture and store fixtures led to a loss of 300 in the furniture and fixtures industry. Leather dropped 400, and food and kindred products remained unchanged from the previous December.

Almost three quarters of the new nonagricultural wage and salary jobs were located in the Atlanta Metropolitan Statistical Area, and most of those were in the trade and services divisions. The remaining divisions had more modest gains. Except for a few minor declines in some manufacturing industries, most notably apparel and fabricated metals, the trend was upward in all of Atlanta's economy.

Five of the remaining Metropolitan Statistical Areas recorded modest gains from December 1985. Savannah's increase of 4,300 (4.4%) occurred mostly in the services and construction industries. The increment in construction occurred largely as a result of the building of the Fort Howard Paper Company. Augusta's growth of 4,100 (2.8%) was primarily in services and trade, as was Columbus's 1,300 (1.5%) increase. Overall, Macon's employment grew by only 200, but there were many fluctuations among divisions. Gains in services; government; finance, insurance, and real estate; and transportation, communication, and utilities were almost completely offset by losses in manufacturing, trade, and construction. Athens added 2,100 jobs, recording increases in every division except construction and transportation, communication, and utlilities.

The only area to decline was Albany. The most significant factor was the closing of the Firestone plant, which resulted in a loss of some 1,400 jobs. Mild increases in services and government were inadequate to overcome losses in manufacturing, construction, and transportation, communication, electric, gas, and sanitary services.

NOTES

All estimates of employment for nonagricultural wage and salary workers (except domestics) for Georgia and all Metropolitan Statistical Areas (MSA's) have been prepared in cooperation with the United States Department of Labor, Bureau of Labor Statistics. They are comparable with the national estimates prepared by that bureau and with state and area estimates prepared by cooperating agencies in other states.

The revised employment series for 1985-1986 have been adjusted to benchmark levels indicative of 1986 records generated by the Georgia Employment Security Agency and supplemented by special benchmark data for groups of workers not fully covered by records from the above agency. These include such groups as railroads and railroad services, insurance agents on straight commission, churches, and other religious nonprofit organizations.

This series is based upon reports submitted by selected cooperating employers, with the exception of proprietors, domestic servants, self-employed persons, unpaid family workers, and personnel of the Armed Forces. Estimates include all full and part-time wage and salary workers who were employed during the pay period containing the twelfth of the month. Regular members of the faculty in private and public schools are considered employed throughout the year even though they may be on vacation during the summer months. Other workers on unpaid vacations are not counted as employed for the period concerned.

The hours and earnings series for 1985-1986 for all industries have been adjusted to the appropriate benchmark for employment and revised where necessary to reflect changes in code definitions or classifications.

Average weekly earnings, average weekly hours, and average hourly earnings in manufacturing industries are estimated for production workers only and exclude supervisory, sales, office, clerical, and other office personnel.

Average earnings are computed on a "gross basis" reflecting changes in basic hourly and incentive wage rates as well as premium pay and overtime and late shift work. Payments made by the employer directly to employees for vacations, holidays, and sick leave are included. Retroactive pay and bonuses, unless earned and paid for on a regular basis, are excluded. Value of free fuel, rent, meals, or other payments in kind is also excluded.

Average weekly earnings are a product of rounded average weekly hours and average hourly earnings.

GEORGIA LABOR MARKET TRENDS

GEORGIA DEPARTMENT OF LABOR LABOR INFORMATION SYSTEMS **JOE D. TANNER, COMMISSIONER**

VOLUME XIII, NUMBER 1
(January 1987 data)

Nonagricultural employment down from December

At 2,723,400, Georgia's nonagricultural wage and salary employment reflected an expected seasonal decline from the December level. The largest drop was in retail trade; the cause was the release of temporary help hired for the Christmas shopping season. An associated decline occurred in business services, specifically temporary help agencies. Construction decreased by 3,300; the decrement affected all segments of the industry division and was caused largely by seasonal factors.

Employment in the manufacturing division was down by 2,500. The most significant factor in the decline was a layoff in one auto assembly plant which discontinued the manufacture of one model of vehicle and retooled for the assembly of another. Less business led to layoffs in a number of floor covering mills; this, coupled with a small decline in yarn and thread mills, caused a decrease of 700 in textile mill employment. Other fluctuations within the manufacturing division were small and of little significance.

Government employment rose 2,500, reflecting the hiring of student helpers in state education, clerical support staff for the annual meeting of the state legislature, and additional employees in some local governments. A slowing of activity in the real estate sector was the primary cause of a drop in employment in finance, insurance, and real estate.

An analysis of over-the-year employment in the state's economy reveals a strong upward trend in most industry divisions. The largest increase in any division came in wholesale and retail trade, with the retail sector growing by 35,600 (7.9 percent) and wholesale trade up 11,900 (6.2 percent). Employment in eating and drinking places rose 16,600; food stores, 5,900; department stores, 4,500; miscellaneous retail stores, 3,500; automobile dealers, 2,600; and apparel stores, 1,100.

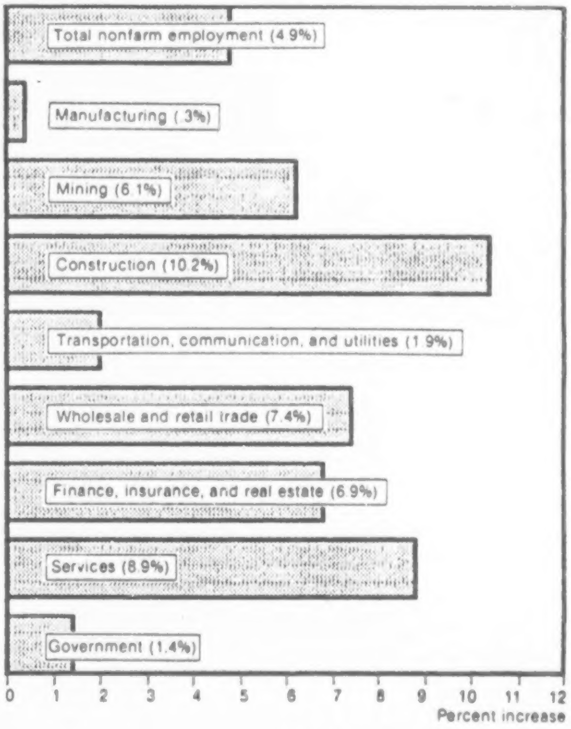
The second largest gain occurred in the service industries. Business services moved ahead strongly, growing by 16,100, or 14.2 percent, from January 1986. Hotels and motels, amusement and recreation, hospitals, private education, legal services, and agricultural services all increased by healthy numbers.

All sectors of the finance, insurance, and real estate division contributed to growth in that division, but more activity in banks, credit agencies, and other financial institutions was the most important factor in the increase.

Government employment rose 6,200 with every segment except federal defense sharing the increment.

Of the 14,700 additional construction workers, 10,700 were engaged in special trades contracting (primarily finishing work). Most of the remainder were employed in heavy building.

Change in nonagricultural employment
January 1986 - January 1987



(Continued on the following page)

Motor freight transportation and warehousing contributed 2,600 new workers to the increase of 3,100 in transportation, communication, and public utilities. A gain of 700 in utilities was partially offset by a drop of 300 in communication.

The manufacturing division managed a small over-the-year increase of 1,700. Internal fluctuations were considerable within the division, however. Transportation equipment dropped 1,100 overall. A decline of 2,600 in automobile assembly plants was partly offset by an increase in aircraft assembly and other transportation equipment, except autos and aircraft. "Other nondurable goods" declined 1,700 because of the shutdown of an Albany tire manufacturer. Primary metals was down because of less business in iron and steel mills and smelting in nonferrous foundries. Less business in paints and varnishes, drugs, soaps, plastic and synthetics, and miscellaneous chemicals resulted in 900 fewer employees in the chemical industry. Decreased activity in sawmills and planing mills, millwork, mobile homes, logging camps, and prefabricated wood products led to a decline of 300 in lumber and wood products, to round out the major losers in the manufacturing division.

On the plus side was textiles with an increase of 2,500. Only knitting mills had fewer employees than a year ago; the remainder of the industry grew modestly. Food and kindred products rose 1,600. The primary gainers were meat and poultry products, bakeries, and sugar. More business in newspapers and commercial printing led to an increase of 1,900 in printing. Smaller increases were reported in paper and paper products (specifically paper and paperboard mills and converted paper and paperboard products); stone, clay, and glass (glass products, cement, pottery, concrete, gypsum, and miscellaneous products); and electric and electronic equipment (electric transmission and distribution equipment and miscellaneous electric and electronic equipment).

Employment increased over the year in each of the state's Metropolitan Statistical Areas (MSA's) except Albany. Atlanta grew at a faster rate than any of the other areas or the state as a whole. The 85,200 new jobs were largely in trade, services, and construction with more modest growth in the remaining divisions. The manufacturing industries grew least of all; the many fluctuations within that division almost offset each other. Employment dropped from December, largely the result of less business in the retail sector following the Christmas shopping season and of the already-mentioned layoff in auto assembly plants.

Employment in the remaining areas closely paralleled the trends in the state and Atlanta with annual growth being concentrated largely in trade and services. Savannah's construction employment grew significantly, due in large part to activity surrounding the Fort Howard Paper Company facility. Albany's decline stemmed from the loss of several hundred jobs because of the closing of the Firestone plant.

Monthly changes among the MSA's followed a predictable pattern. Seasonal layoffs occurred in retail trade, and small fluctuations took place among the remaining divisions.

NOTE: These preliminary estimates were prepared in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics, based upon monthly reports submitted by selected employers throughout Georgia. The estimates include all full- and part-time wage and salary workers who were employed during or received pay for any part of the pay period that includes the twelfth of the month. Proprietors, domestic servants, self-employed persons, unpaid family workers, and personnel of the armed forces are excluded. Estimates based on 1986 benchmark. Totals may not add because of rounding.

GEORGIA LABOR MARKET TRENDS

GEORGIA DEPARTMENT OF LABOR LABOR INFORMATION SYSTEMS **JOE D. TANNER, COMMISSIONER**

VOLUME XIII, NUMBER 2
(February 1987 data)

Proposed hydrogeology center at Georgia State University

For years, many of this country's forward-looking scientists and lay people alike have warned that the United States is facing a water shortage of crisis proportions in coming years if drastic steps are not taken to forestall it. We have all read or heard the horror stories of rivers that catch fire, poisoned canals, and contaminated aquifers that threaten the health of whole cities.

Until recently, most Georgians seemingly had little reason to be concerned with this issue, for our state's plentiful water supply is the envy of many water-poor areas. There were warnings, of course, that this abundance might not last, but they were, for the most part, isolated instances. It was not until last year when a statewide drought devastated much of Georgia's agriculture, forced strict controls on nonessential water usage, and left the Rabun County town of Clayton without water for several days that we realized that it can happen to us.

The increasing problem of disposal of sewage and industrial wastes will challenge the nation for years to come. The state as a whole and the rapidly growing Atlanta area in particular are facing some critical decisions. To meet the challenge, Georgia State University's Department of Geology is proposing to establish a Center for Hydrogeology, the purpose of which is to promote research, training, and public service and to develop and manage ground water resources.

The proposed center's goals are:

- to provide students with a comprehensive education in theoretical and applied aspects of hydrogeology.
- to provide usable skills for professionals employed by state and federal agencies and private industry.
- to serve as a resource for protection and management of ground water resources of the state and the region.
- to serve as a resource for extension and expansion of current knowledge in hydrogeology.

Currently GSU's Department of Geology offers the Master of Science degree with a major in geology and specialization in hydrogeology. Through a broad-based program, both field-oriented and theoretical curriculum in hydrogeology exposes students to ground water quality management strategies. A Master of Science in Hydrogeology is proposed.

In addition to the degree program, the department will conduct seminars, short courses, and workshops dealing with current issues and state-of-the-art technology. A training program in advanced hydrogeology for nondegree students is proposed. Students satisfactorily completing the program will be issued a certificate.

The hydrogeology program will focus on areas related to ground water monitoring, field instrumentation, testing, protection, waste management

(Continued on the following page)

Little change in employment

Georgia's nonagricultural wage and salary employment was relatively flat from January to February of this year. As the winter is traditionally a time of reduced activity in many industries, this occurrence was not unexpected. The only noteworthy gains were in services and government. Business services increased by 3,100, due in part to the staffing of seasonal tax services. Personal services, which includes such diverse activities as laundries and cleaners, photographic studios, barber and beauty shops, and car title and tag services, increased 400. Government employment rose 2,800, largely the result of seasonal staffing of Internal Revenue Service offices and increases in state and local education.

Retail trade dropped by 3,000. This was the result of normal seasonal cutbacks after the Christmas shopping season and January clearances.

The February 1986 to February 1987 estimates showed a definite upward trend, increasing by 120,000 (4.6%). Almost all of the gain occurred in nonmanufacturing industries.

Wholesale and retail trade posted the largest gains. The most significant increase was in eating and drinking places. Food stores, miscellaneous retail stores, department stores, and auto dealers and service stations also recorded sizeable gains.

The second-largest increment was in the fast-growing services division. Business services accounted for almost half of it. Other gainers were medical and health services, except hospitals; hotels

(Continued on the following page)

Little change in employment

and motels; amusement and recreation, except motion pictures; and agricultural services.

Construction, up 13,300, had the largest percentage increase of any major industry division (9.2%). The growth occurred primarily in special trades contracting. Smaller increments were recorded in heavy construction and general building.

Transportation, communication, and utilities was up 4,000 (2.4%). The largest gain occurred because of more business in water transportation. Telephone communication and electric, gas, and sanitary services also increased.

The manufacturing division rose 1,100 overall. There were, however, numerous fluctuations among the various industries. The most significant of these occurred in printing, transportation equipment, and "other nondurable goods." Transportation equipment and "other nondurables" declined, the former because of a temporary cutback in automobile assembly plants and the latter because of the closing of the Firestone plant in Albany during last year.

More business in newspapers, commercial printing, and miscellaneous printing caused an increase of 1,500 in that industry.

The pattern in the Atlanta MSA closely paralleled the changes in the state's employment. The trend in the remaining MSA's was mostly flat, except for Savannah which recorded significant over-the-year growth in construction because of the building of the nearby Fort Howard Paper Company facility.

Proposed hydrogeology center at Georgia State University

strategies, regional hydrogeology, water chemistry, and water well hydrolics. Students will have access to computers, logging equipment, drilling equipment, geophysical and water quality instrumentation, and vehicles. A cooperative work-study program with industry, state, and federal agencies is possible.

An advisory council has been formed to provide advice and direction. Its members are Mr. Jeffrey T. Armbruster, U.S. Geological Survey; Dr. James E. Kundell, University of Georgia; Mr. James W. Poirot, CH2M Hill Companies; and Mr. Howard D. Zeller, Georgia Department of Natural Resources.

GEORGIA LABOR MARKET TRENDS

GEORGIA DEPARTMENT OF LABOR LABOR INFORMATION SYSTEMS JOE D. TANNER, COMMISSIONER

VOLUME XIII, NUMBER 3
(March 1987 data)

ETA labor surplus area list

The Employment and Training Administration of the U.S. Department of Labor annually issues a list of areas of high unemployment which qualify as labor surplus areas. Normally, the list is released in September, becomes effective in October, and remains in effect through the following September. Technical difficulties prevented the compilation and timely release of the list for FY 1987, however, and the old list was extended through March 1987. A new listing has now been released that will be in effect from April I, 1987 through September 30, 1987.

Political jurisdictions in Georgia that have been designated as labor surplus areas for fiscal year 1987 are as follows:

CITIES

Albany Augusta Rome

COUNTIES

Bartow Brantley Calhoun Chattooga Crisp
Dodge Early Elbert Emanuel Evans
Fannin Greene Lamar Lincoln Macon
McIntosh Meriwether Pierce Pike Polk
Pulaski Quitman Stewart Talbot Taliaferro
Taylor Telfair Terrell Turner Union
Upson Wayne Webster Wilkes Worth

The purpose of designating labor surplus areas is to encourage government agencies to purchase goods and services in areas of high unemployment. Employers who operate businesses located in those areas receive preference in bidding on federal procurement contracts.

The list is based on the unemployment rate for the two most recent calendar years. The two-year average is used to ensure that only those areas experiencing high levels of structural unemployment are targeted to receive federal procurement contracts.

To be designated a labor surplus area, a civil jurisdiction must have an unemployment rate during the reference period that is equal to at least 1.2 times the national unemployment rate or 10 percent regardless of the national rate. During periods of low national unemployment, no area will be classified as a labor surplus area unless its two-year average unemployment rate was 6 percent or higher. The qualifying rate for the current list is 9 percent (1.2 times the two-year national average of 7.5 percent).

A provision exists for adding an area when an unusual event causes a sudden rise in unemployment. The primary criteria are that the occurrence must be permanent or long-term and must have substantial impact on the

(Continued on the following page)

Seasonal gains in service industries

Mostly small, scattered gains in most industry divisions resulted in an overall increase of 11,100 from February to March. More than half the increment was recorded in the service industries. Business services rose 2,700, largely the result of seasonal staffing of tax preparation offices. Few of these jobs are either long term or full time. They are, rather, temporary sources of extra income for many people who already have other jobs or who only wish to work part time. Amusements and recreation gained 2,100, mostly because of the weekend opening of a popular amusement park. These jobs also are seasonal, and most of them are held by students.

Retail trade gained a respectable 2,900 jobs, almost half of them in eating and drinking places. Businesses selling building materials, hardware, and garden supplies added staff for the spring "clean-up, fix-up" season. The expected seasonal increase in driving brought more business to automobile dealers and service stations.

The construction division dropped 2,700. The decline occurred in special trades contracting, which is primarily inside finishing work, and in general building.

Except for finance, insurance, and real estate, which was unchanged, the

(Continued on the following page)

Seasonal gains in service industries

remaining divisions posted small increases of little significance.

Job growth from a year ago amounted to 110,300. Three-fourths of the gain occurred in trade and services, the state's (and the nation's) fastest growing industry groups. Among the retail trade industries, eating and drinking places added 15,900 employees; food stores, 6,400; miscellaneous retail stores, 3,400; department stores, 3,000; and automobile dealers and service stations, 2,400. Big gainers in the service industries were business services, up 17,700; medical and health services, except hospitals, up 5,800; hotels and motels, up 3,400; amusements and recreation, up 3,100; agricultural services and hospitals, up 1,900 each; and legal services and private education, up 1,400 each.

The gain of 7,700 in construction was concentrated in special trades contracting, although there was some growth in heavy building. General construction declined 1,400 from March 1986.

Other developments worth mentioning included an increase of 3,800 in textile manufacturing. Although the healthiest growth was in floor covering mills, all other segments of the industry shared the gains. At 105,700, employment returned to a level not seen since mid-1984.

The transportation equipment industry fared less well. In January, a large Atlanta-area automobile assembly plant laid off 2,000 workers for retooling in connection with a model change. Most of these workers remain on furlough. The loss was partially offset by more business in aircraft assembly and other types of transportation equipment.

Except for the Atlanta area, where trends roughly paralleled those of the state as a whole, monthly growth in Georgia's Metropolitan Statistical Areas (MSA's) was flat. All except Albany, where the employment picture continues to be bleak, posted over-the-year gains.

ETA labor surplus area list

area's unemployment rate. Last year, a petition was filed and granted giving labor surplus area status to the city of Albany. This followed the closing of the Firestone facility.

Information about bidding on federal contracts can be obtained from:

GEORGIA LABOR MARKET TRENDS

GEORGIA DEPARTMENT OF LABOR LABOR INFORMATION SYSTEMS JOE D. TANNER, COMMISSIONER

VOLUME XIII, NUMBER 4
(April 1987 data)

Upswing in employment for state and Atlanta

Georgia's nonagricultural wage and salary employment rose 15,400 from March, a .6 percent increase. Of all the major industry divisions, only mining failed to share in the growth.

Employment among the manufacturing industries increased 1,200, almost all of it in the nondurable goods group. Textiles and apparel grew by 400 jobs each, primarily in floor covering mills and men's and boys' clothing. Printing, publishing, and allied industries also recorded a modest gain. The meat and poultry segments of food and kindred products declined slightly.

Among durable goods, small gains in transportation equipment and stone, clay, and glass were almost completely offset by small losses in several other industries.

Most of the monthly gain was in the nonmanufacturing industries with more than two-thirds of it concentrated in the two fastest growing divisions: trade and services. A general increase in wholesale nondurables was strongest in food products and farm products.

Well over two-thirds of the increase in retail trade was concentrated in eating and drinking places. The increased driv-

Continued on the following page

Above average income growth in Georgia

Georgia was one of 15 states recording above-average gains in per capita personal income in 1986, according to just-released figures from the U.S. Department of Commerce's Bureau of Economic Analysis. The strength of the state's manufacturing and commercial and residential construction was credited with the income growth.

Georgia is ranked 28th in the nation in terms of per capita personal income. The state is third in the 12-state Southeast region, behind Virginia and Florida.

By definition, personal income is the income received by all persons from all sources, including production, business and government transfer payments, and government interest. It is the sum of private and governmental salary disbursements, other labor income, proprietors' income (including both farm and nonfarm), rental income, dividend income, interest income, and transfer payments (such as social security or welfare payments), less personal contributions for social insurance. Personal income is measured before taxes are deducted. Per capita personal income is residents' total personal income for the year divided by the population as of July 1.

Upswing in employment for state and Atlanta

(Continued from page 1

ing that accompanies the return of warm weather sparked a gain of 1,000 in automobile dealers and service stations. The opening of a new retail chain and some seasonal hiring led to 750 additional jobs in department stores.

Almost all of the growth in the service industries took place in two segments. Business services rose 2,900, most of it in temporary services. Amusement and recreation added 1,900, largely because of the opening of seasonal amusement parks and the beginning of the baseball season.

The increase of 1,200 in transportation, communication, and public utilities was entirely in air transportation. Following the recent merger of Northwest Airlines and Delta Air Lines, several hundred employees were reassigned to Atlanta.

Spring weather brought an upsurge in construction. The activity was concentrated in the areas most susceptible to weather conditions: highway construction and heavy building.

Government employment rose 1,000. A small decline in state government was more than offset by increases in federal government and local government. The single most significant factor in the rise in local government was the expansion of the Fulton County Sheriff's Department.

Annually, employment rose 98,900, or 3.7 percent. Almost three-quarters of the gain was concentrated in trade and services. Almost all segments of wholesale trade grew. By far the largest increase in the retail sector occurred in eating and drinking places. Food stores, department stores, miscellaneous retail stores, automobile dealers and service stations, and building material stores also recorded significant increments.

Gains in services were scattered throughout the division, but the most significant were in the rapidly growing business services sector and in health services. Much of the growth in health services was in nursing homes.

More activity in the construction industry was confined to two sectors: heavy building, which is primarily road construction, and special trades contracting, which is mostly inside finishing work. The former was up 2,200 from last year; the latter grew by 5,100. General building declined 1,700.

Most of the 3,000 new jobs in transportation, communication, and public utilities were in the transportation sector. Motor freight transportation grew by 2,000, and airline transportation was up 900. These gains were moderated by a drop of 900 in railroads. Communication and public utilities added 600 each.

More business in banks, credit agencies, and other financial institutions accounted for about half the growth in finance, insurance, and real estate.

Government employment rose 7,000. Although federal and state government increased slightly, most of the gain occurred in local government. Several metropolitan Atlanta counties increased staffing, as did Richmond County and the City of Savannah.

The manufacturing division rose only 2,000 overall, but some significant fluctuations occurred. Textile employment rose 4,000. Most of the gain was attributable to more business in floor covering mills, but each of the remaining sectors also grew. Printing and publishing rose 1,000, largely because of more activity in newspapers. On the negative side were declines in automobile assembly, lumber and wood products, and chemicals.

The Atlanta MSA recorded two-thirds of the monthly growth in jobs and 70 percent of the annual increase. The remaining jobs were shared by the rest of the state.

GEORGIA LABOR MARKET TRENDS

GEORGIA DEPARTMENT OF LABOR LABOR INFORMATION SYSTEMS JOE D. TANNER, COMMISSIONER

VOLUME XIII, NUMBER 5
(May 1987 data)

Little change in nonmanufacturing employment

May saw little change in Georgia's nonmanufacturing employment. Overall, it rose 5,500 with 1,500 in manufacturing and 4,000 in nonmanufacturing industries.

The largest increase (1,900) occurred in the trade industries. The major growth in the retail sector was in miscellaneous retail stores, the result of expansions or new businesses. Department stores gained 400 because of the expansion of a major retail chain. The normal spring increase in driving led to growth in automobile dealers and service stations. Eating and drinking establishments added 400 employees largely because more outdoor activities spurred more business in fast food establishments.

A loss of 500 in nondurable wholesale trade partially offset the gains in the retail sector. The biggest declines were in groceries and farm product raw materials.

Government employment rose 1,900, almost evenly divided among the federal, state, and local sectors. Increased hiring at Internal Revenue and the Eastern Distribution Center spearheaded the gain in federal employment. Higher employment at the University of Georgia and scattered increases in other state agencies accounted for the increment in state government, while local government rose because of small gains scattered throughout the sector.

The gain of 1,500 in manufacturing was an illusory one, caused by a statistical abberation. One large automobile manufacturer called back 1,800 employees from a temporary layoff. A few days later, another laid off an entire shift as a preface to a long-term shutdown while the facility is rebuilt to produce a different type of vehicle. Because sample reporting for estimating purposes is based on the week which contains the 12th of the month, the layoff was not reflected in this month's estimates while the recall was.

Changes in all the remaining manufacturing industries were minor. There was some slight growth in floor covering mills. Women's and children's clothing and men's and boys' clothing declined by 400 and 300 respectively, but the decreases were partly offset by gains in miscellaneous apparel manufacturing. Modest growth in lumber and wood products occurred because of more

Continued on the following page

New developments

Rhone Marieux, Inc., of Lyon, France, has announced plans to build another serum production plant in Athens. The 67,000-square-foot facility, which will employ approximately 65 people, will be built on a 20-acre site in Athena Technology Park. The new plant will complement the existing facility which makes vaccines for veterinary use. In addition to manufacturing established products, they will develop new ones.

Handy City, a subsidiary of Channel Home Center of Whipanny, New Jersey, has closed six Atlanta area stores. The now-defunct stores employed about 200 people.

Shamrock of Dublin, a Dublin-based apparel plant, is expected to shut down by the end of the month, idling 300 people. Apparelcraft, located in Wrightsville, was also scheduled to be closed by Society Brands, Inc., the parent company of both facilities. Apparelcraft was purchased by a group of Charlotte, N.C., investors and is now operating under its new name, Apparel Brands, Inc.

General Motors Corporation has closed its Doraville assembly plant for a major overhaul. The facility will be closed for approximately four months while the interior is completely rebuilt to manufacture the new GM-10 automobile. Some 5,000 workers have been temporarily idled; most of them will receive about 95 percent of their normal pay during the layoff. The retooling and subsequent change in production schedule may result in the loss of some jobs at Doraville, but retirement and an increased number of jobs in the Lakewood plant is expected to minimize any layoffs.

Little change in nonmanufacturing employment

continued from page 1

business in logging camps, sawmills, and planing mills and in millwork, veneer, plywood, and structural wood products.

Transportation and public utilities gained 1,100, almost all of it in transportation. The expansion of one marine cargo handling company and more business in motor freight contributed to the growth, as did one large airline's continuing transfers of personnel to Georgia from other cities.

A small gain in finance, insurance, and real estate was caused almost entirely by more business in insurance agencies.

Services recorded one of its rare declines. One large hotel cut back staff, and many tax services released employees hired to work during the income tax season. Gains in business services, primarily janitorial and temporary employment services, partially offset the loss. Outdoor amusements also added 300.

Construction employment dropped 600. A large electrical contractor laid off a substantial number of workers. Heavy building showed a slight increase, while general building was virtually unchanged.

Well over two-thirds of the May 1986 - May 1987 increase of 90,900 occurred in the trade and services divisions. Business services was the big winner, having over half the growth in total services. Increases in trade were more evenly divided. Healthy gains occurred throughout wholesale trade. Trends in the retail sector varied more, although almost every segment grew in some measure. The greatest growth was in eating and drinking places.

Overall, manufacturing increased by only 5,500 from last year. More impressive, perhaps, is the fact that 4,000 of these jobs were in the long troubled textile industry. Although half were in floor covering mills, the sector that has been least affected by negative trends, all of the remaining segments shared in the recovery to some degree.

Textiles' sister industry, apparel, fared less well. The industry lost 300 jobs, all in women's and children's clothing. The remainder of the industry held its ground, neither gaining nor losing.

The Atlanta Metropolitan Statistical Area dominated the state's job growth. With just over 50 percent of Georgia's nonagricultural jobs, Atlanta had 72 percent of the over-the-year increase and growth equal to 100 percent of the monthly gain.

Each of the remaining MSA's recorded modest growth from last year. Monthly changes, however, were mere fluctuations of no real significance.

LABOR INFORMATION SYSTEMS
JOE D. TANNER, COMMISSIONER

VOLUME XIII, NUMBER 6
(June 1987 data)

Seasonal gains cause employment increase

The State's nonagricultural wage and salary employment rose 3,300 from May, a modest increase that concealed numerous fluctuations among the various industries.

The manufacturing division gained 1,000. Increases in nondurable goods were partially offset by declines among most of the durable goods industries.

Seasonal factors provided the impetus for a rise of 1,100 in food and kindred products. An abundance of fresh fruits and vegetables led to 400 more jobs in food canning and processing plants. Several poultry and egg processing facilities reported more business, and employment rose by another 400 in that industry. More business was also reported in fresh and frozen fish and seafood.

Textile mill employment rose by 600. There was a modest increase in woven and tufted carpets and rugs and a small gain in fabric finishing.

Although apparel rose 300, it was not a true gain in employment. Rather, it reflected a return to normal following a layoff in miscellaneous apparel and fabricated textiles.

The most significant decline occurred in transportation equipment, but the net loss of 500 does not tell the entire story. While one large automobile assembly plant laid off 2,200 people in connection with retooling for model change, another was hiring because of increased production needs. One large aircraft assembly plant also hired an additional 1,200 people to enable it to meet its contractual obligations.

Although up 2,500 overall, the service industries also recorded numerous internal fluctuations. There were seasonal increases in outdoor amusements and in hotels and motels. Health services rose modestly, as did civic, social, and fraternal organizations. Small gains were reported in engineering, architectural, and surveying services; and in accounting, auditing and bookkeeping services.

Declines occurred in several sectors. Private education had a seasonal loss because of the end of the school year. Small declines were also recorded in social services and business services, the latter because of less business in temporary help agencies.

Transportation, communication, and utilities rose 1,700, mostly because of more business in motor freight transportation and warehousing.

Among the trade industries, only the retail sector increased. Modest

New developments

American Telephone and Telegraph Company will recruit and hire 1,000 workers to staff its new billing center, which will serve the Southeast region. Despite the company's national push to reduce employment, the decision was made to open two billing centers in Atlanta, one in an existing building in Alpharetta and a smaller facility which is under construction in Hapeville. The company will begin hiring for the Alpharetta center at a two-day job fair scheduled for July 17 and 18, according to a company spokesman.

Since the 1984 breakup of the Bell System, AT&T has contracted with BellSouth to print their monthly bills.

Although the effect of the loss of this contract on BellSouth's operations is not known at this time, the company has already announced that it is scaling back its billing operations. A small billing center in Macon will close by early January 1988. The affected employees will be offered transfers to other divisions within the company.

Perky Cap, Inc. will begin operations in Eatonton in September. The company will manufacture baseball-type caps designed for advertisements or special promotions. It will eventually employ 200 people in an area where the unemployment rate is almost twice the state average. More than 700 jobs have been lost from the area this year by the phasing out of Enterprise Aluminum Company, a manufacturer of cookware, and Eatonton Manufacturing Company, an apparel plant.

Signal Knitting Mills of LaGrange will cease its cutting and sewing opera-

Seasonal gains cause employment increase

Continued from page 1

gains were reported in department stores, furniture, home furnishings, apparel, and accessories.

Finance, insurance, and real estate rose 500. More business was recorded in banking, securities and commodities, and insurance.

The gain of 300 in construction was evenly divided among general building, heavy construction, and special trades construction.

Government was the only division to post a decrement from May, a seasonal occurrence because of the closing of schools for the summer. Both state and local education were affected. The Internal Revenue Service also laid off some 500 temporary workers. On the plus side were slightly more than 2,000 summer workers hired in various executive and legislative offices of both state and local governments.

Year-to-year growth in the state amounted to 80,100. An overwhelming majority of the new jobs were in the trade and services divisions.

Services increased most: 29,700. The fastest growing segment of the services division is business services, up 14,100. Medical and health services was a distant second, up 5,100. Hotels, amusements and recreation, and hospitals also grew modestly. Almost all of the remaining segments posted small increases.

Trade grew by 27,100, most of it in the retail sector. Restaurants and department stores tied for top growth, both up 4,400. Food stores rose 3,400, miscellaneous retail stores gained 3,200, and auto dealers and service stations increased 2,400. Apparel stores and furniture stores gained 800 and 600, respectively.

Manufacturing was up by 6,700, fairly evenly divided between durable and nondurable goods. The most noteworthy gain occurred in textiles, which rose 4,300. Although the general trend in this industry was upward, more than half the growth took place in floor covering mills. Machinery, except electrical, rose 1,400 because of more business in farm machinery and in nonelectrical office, computing, and accounting machines.

More business in newspapers and commercial printing caused a rise of 800 in printing and publishing, while miscellaneous plastic products rose 500.

The increase in primary metals was no true gain. Last year at this time, a strike was in progress in that industry. This year's figures reflect normal employment levels.

Transportation, communication, and public utilities grew by 6,400. Most of the increase occurred because of more activity in telephone communication and motor freight and warehousing. Small declines were reported in railroads, transportation services, radio and television, and telegraph communication.

Government employment rose 4,700, mostly in local government. As well as growth in local school systems, more summer help and part time workers are now employed at the local level. Federal government employment is up because of increased hiring at Internal Revenue.

Mining rose 800 over the year, largely because of more business in crushed and broken granite and in kaolin.

New developments

Continued from page 1

tions, idling 70 employees, according to a spokesman for Signal Apparel Company, Inc., the Chattanooga, Tennessee-based parent company. The knitting, dyeing, and finishing work, which employs 200 people, will continue, he said. Despite the cessation of sewing, additional fabric-producing jobs will be created at the plant as it is modernized and upgraded.

Certainteed Corporation, a manufacturer of building materials and fiberglass products, announced the closing of its Savannah roofing plant. The facility, which has 140 employees, will be phased out over the remainder of this year.

A spokesman for the Valley Forge, Pennsylvania-based company said the functions of the Savannah plant would be moved to another plant in Oxford, North Carolina. The age and inefficiency of the facility were blamed for the shutdown, which comes at a time when manufacturing capacity is substantially greater than demand throughout the industry, according to some analysts.

Swift Independent Packing Company has announced plans to close its hog slaughtering plant in Moultrie. In addition to the loss of some 350 jobs and an annual payroll of $4.5 million, the community will feel the impact indirectly, as well. Swift purchased about 118 million hogs each year, many of them from area farmers, who will now have to seek new markets for their livestock.

VOLUME XIII, NUMBER 7
(July 1987 data)

Schools, Autos, Business Services Cause Drop in Employment

Although up a substantial 74,600 from last year, Georgia's nonagricultural employment declined 10,100 from May, largely the result of seasonal factors. The monthly decrements came in manufacturing, government, and services.

Government employment dropped 11,700, almost entirely the result of seasonal declines in state and local education with the closing of schools for summer vacation. Over-the-year growth amounted to 8,700, distributed throughout the division.

Manufacturing was down 3,500, most of it in the durable goods sector, and more specifically, in transportation equipment. The decline in nondurable goods was much smaller; it occurred primarily in the apparel industry.

The drop in employment in transportation equipment was the result of an additional layoff at one large automobile assembly plant for retooling and a smaller layoff in an aircraft assembly plant's fabrication department. Although the assembly of certain aircraft under contract has not yet been completed, the necessary parts have been manufactured.

Nonelectrical machinery dropped by 500 from last month. The decrement was seasonal, reflecting a cutback in the manufacture of garden tractors and lawn and garden equipment.

Paper and paper products showed a decline of 700 over the month. This was largely the result of a strike in one large plant.

The decline of 700 in apparel is deceptive, reflecting no true drop. Rather, it results from the fact that many apparel manufacturers close for vacation in July, and this period extended into the reference week for which the employment estimates are made.

From last year, manufacturing employment rose 11,200. Almost half the growth was in textile mills, and much of that was in floor covering mills. Cotton weaving mills also recorded healthy growth from July 1986.

Printing and publishing increased by 1,000 from the previous year, about

New Developments

Hanes Knit Products of Winston-Salem, N.C. will open a plant in Clayton, Georgia, Hanes President Jack Ward announced recently. The company will purchase a 250,000 square-foot building formerly occupied by Sangamo Weston. The new plant will produce textiles for Hanes underwear and for its imprintable sportswear line. Building modifications and equipment installation are expected to be completed by the spring of 1988, at which time the company will employ 300 people.

United Telecommunications, Inc. and **Volt Information Sciences, Inc.** will bring a new electronic version of the "yellow pages" to Atlanta in September. The service, which will be free to callers, will allow people to request information about area businesses. The firms will be cross-indexed by name, location, and type. Although all Atlanta-area businesses will be included in the index, those that pay a fee for the service will be listed first, more information about them will be provided to callers, and they will receive feedback about the inquiries relevant to their type of business. This enterprise will employ 250 people, according to the general manager.

Egg Products, Inc., a corporation comprising 18 major egg producers in the Southeast, will open in Blackshear, Georgia. The company, which will locate on an 18-acre tract in Blackshear Industrial Park, will initially employ 60 people and have an annual payroll of $700,000. The plant will produce dried and liquid egg products for use in such food items as cake mixes and candy.

The Great Mall of China opened in Atlanta's Ponce Square recently. Occupying 50,000 square feet of space, the store is unique. Its entire 20,000-item stock is manufactured in the People's Republic of China. The Great Mall has 12 departments selling everything from items cost-

Schools, Autos, Business Services Cause Drop in Employment

Continued from page 1

half in newspapers. Commercial printing also grew by a healthy margin.

In an unusual occurrence, services declined by 1,300. For the first time in many months, employment in business services decreased. Declines in temporary help agencies and firms engaged in the cleaning and maintenance of buildings recorded less business, causing a drop of almost 2,000 in that sector.

Those same industries contributed to the over-the-year growth in services, along with consulting firms, amusements and recreations, and health services. The gain in amusements and recreations was caused largely by continued expansion in the state's major amusement parks.

Health services partially offset the overall loss in the services industry from the previous month as well as contributing to the annual growth. Several factors came into play. The monthly gain occurred because of a significant increase in skilled nursing care facilities. Over-the-year increases were due to growth in nursing homes, health maintenance organizations, and private hospitals. Growth in hospitals refects the expansion of programs designed to meet the demand for such specialized services as arthritis programs, "wellness" programs, and plastic surgery.

On the plus side, retail trade grew by 3,100, although its companion division, wholesale trade, declined by 800. The extraordinary proliferation of retail shopping malls and neighborhood shopping centers has caused continuous growth in the retail sector for some time, especially in the metropolitan Atlanta area. This growth has included department stores, specialty stores, and auto and home supply stores. Several of the major grocery chains continue to upgrade their facilities, and many of the oil companies are replacing their traditional gas stations with combination gas stations and food marts. There seems no end to the increase in the number of eating and drinking places. These latter are an especially important source of "first jobs" for teens, often their introduction to the world of work. Because of the hours, the nature of the business, and the youth of most employees, turnover is rapid, so the demand for personnel is constant, and made even more acute by the expansion of these firms.

Construction rose 2,000 from last month, most of the increase centered around special trades contracting, particularly electrical work, roofing, and sheet metal work. Heavy building remained stable, and general construction was weak, recording a small loss.

From last year, all sectors of construction dropped. All indications point to a slowdown in the industry; much of the recent activity has centered around completing projects already underway. New construction appears sluggish, reflecting some uncertainty about the future course of the economy and the less favorable treatment of real estate investments under the new tax law.

Finance, insurance, and real estate grew modestly from both reference periods. The monthly increase largely reflects seasonal summer hiring.

Transportation, communication, and utilities also rose over the month and over the year. The monthly gain occurred largely because a major communication firm expanded its Atlanta operations and added 1,100 new employees.

New Developments

Continued from page 1

ing less than $1 to sixty-thousand dollar antiques and art. According to Peter Miller, the store's manager, the merchandise is otherwise available only in China. The retail store employs 40 people, and the Great Mall also has a wholesale showroom.

Greyhound Lines, Inc. has announced plans to locate its Southern regional office in Atlanta. The establishment of the regional office comes in the wake of Greyhound's purchase of Trailways Lines Inc.; the purpose is to allow closer contact between customers, agents, and employees. The office will be responsible for routes in Georgia, Florida, Mississippi, Alabama, and parts of Tennessee, North Carolina, and South Carolina.

Han-Har Metal Finishing will locate in Long County in Southeast Georgia. The company will employ 41 people.

Atlanta-based AZS Corporation has sold its Atlanta plant, and the new owners have laid off half the company's 80 employees. The plant, located at 762 Marietta Street, makes chemical coatings, resins for textiles, and adhesives. The new owners, Minneapolis-based Cargill, Inc., a world-wide operation, has another facility in Forest Park.

Allen-Bradley Company of Dublin has laid off 60 workers. The company, which is owned by Rockwell International, manufactures programmable controllers. A company spokesman blamed soft market conditions and said that they expect to recall employees when the market improves.

Delco-Remy of Albany, a manufacturer of generators, has laid off 95 workers indefinitely. At the same time, production cutbacks were announced to bring volume in line with the needs of the company's customers. These are expected to be temporary and will coincide with retooling in automobile assembly plants.

GEORGIA LABOR MARKET TRENDS

GEORGIA DEPARTMENT OF LABOR
LABOR INFORMATION SYSTEMS
JOE D. TANNER, COMMISSIONER

VOLUME XIII, NUMBER 8
(August 1987 data)

Textile Leads Increase in Manufacturing

The majority of the growth in Georgia's nonagricultural wage and salary employment occurred in the manufacturing industries. Half of the total gain in manufacturing was in the textile industry.

Although the increase affected the entire industry, the major portion of it was in floor covering mills. A spokesman for one carpet manufacturer attributed the increased demand for his company's product to people choosing to redecorate existing houses rather than move into newer and correspondingly more expensive quarters. He further stated that production schedules have expanded the demand for workers to the point that it is difficult for the local labor market to supply enough qualified people.

Several other manufacturing industries grew by smaller numbers. Transportation equipment rose by 500, the gain almost equallly divided between automobile assembly plants and aircraft assembly plants. Food and kindred products rose 300, most of it in poultry and egg products.

Employment in the service industries increased by 1,700. The rapidly expanding business services sector accounted for about two-thirds of the increment. Health services contributed 500, mostly in private hospitals.

Government employment was up 1,300. Employment increased substantially in local education because of preparation for the reopening of elementary and secondary schools. Declines occurred throughout federal and state government. The Internal Revenue Service laid off additional seasonal workers as did some state colleges.

Mining; construction; and finance, insurance, and real estate posted small gains.

The remaining divisions declined from the July estimates, including, surprisingly, retail trade, which has been growing consistently for some length of time. Most of the decrease was in eating and drinking places. An industry spokesman said many youthful summer workers left their jobs before summer's end in order to have a vacation before the beginning of school.

From August of last year, the state's nonagricultural wage and salary employment rose by 63,200, or 2.4 percent. Every major industry division except contract construction shared in the growth.

The largest gain was in the service industries. The rapidly expanding business services sector accounted for

New Developments

The Sherwin-Williams Company announced that it will build a 175,000-square-foot distribution center in the LaGrange Industrial Park. The plant, which will occupy a 19-acre site, is expected to begin operations in January of next year. About 45 persons will be employed initially. The Cleveland, Ohio, company will begin hiring in November and will train most of its employees through the Quick Start program, operated jointly by the Georgia Department of Labor and the Division of Post-Secondary Education.

McGregor Golf Company has laid off 40 employees at their Albany plant, following an earlier layoff of 15 people. A company spokesman blamed seasonal factors for the cutback. He said he hopes to recall most of the workers by the end of the year. The plant manufactures golf clubs, and distributes other related sporting goods.

Victor W. Weaver, Inc has announced the closing of most of its Hall County operations. The portion of the plant where poultry is cut up and deboned is being closed because of poor sales, according to a company spokesman. Some 360 persons will lose their jobs, he added. A poultry freezing facility, which employs about 25 people, will remain open.

Shaw Industries, Inc. has purchased a 250,000-square-foot building in Thomson, Georgia. Shaw, a Dalton-based carpet producer will make yarn in the facility, which was formerly occupied by Uni-Royal. According to a company

Textile Leads Increase in Manufacturing

Continued from page 1

almost half the increment. Health services contributed another 7,000.

Overall, the trade industries rose 20,600, almost 75 percent of it in retail trade. The major gainers were department stores (up 4,400), food stores (up 3,000), auto dealers and service stations (up 2,700), apparel and accessory stores (up 900), restaurants (up 1,100), and miscellaneous retail stores (up 3,000). These increments represent partly expansions of existing businesses and partly the entry of new firms into the market. The service station sector, in particular, reflects the proliferation of the combination food market and gasoline stations that are increasingly replacing traditional service stations.

The durable goods sector of wholesale trade rose by 3,000, while wholesale nondurable goods increased 2,200. Most of the gain in the durable goods sector occurred in commercial machines and equipment. Increases in nondurable goods were scattered throughout the group.

Government was up 9,300, with gains in all sectors. The largest increase was in "other local government."

Manufacturing rose 7,400 from August 1986, most of it in the durable goods segment. More specifically, the noteworthy gains came in transportation equipment and nonelectrical machinery.

A portion of the increase in transportation equipment is not a true gain; rather, it reflects the fact that layoffs in automobile assembly plants were smaller this year than during the same month last year. The state's aircraft assembly plants hired an additional 1,000 people during the year. Miscellaneous transportation equipment accounted for the remainder of the gain.

Nonelectrical machinery had a situation similar to that in transportation equipment in that layoffs in the farm machinery manufacturing segment were greater in August 1986 than in August 1987. An additional 500 people were employed in making heating and air conditioning equipment, however.

Textile mill employment grew by a healthy 4,300 from last year, most of it in floor covering mills. Although there was slight growth in most other segments, the true story seems to be fewer layoffs in these industries during this month than occurred last year. Although this does not represent true growth, it is, nevertheless, an indication of the improved economic health of the industry.

Food and kindred products increased by 700 overall. Poultry products was up by 1,200 and other meat products by 500. Scattered declines occurred among most of the remaining segments.

On the negative side, apparel recorded the largest loss: 1,300 which was largely the result of the closing of a number of apparel manufacturing plants. Most of these were engaged in the manufacture of women's and children's clothing. Men's and boys' clothing decreased slightly, while miscellaneous apparel gained by a small number.

Less business in paper and chemicals led to declines in those industries.

Finance, insurance, and real estate rose 3,100, all of it in banks and other financial institutions and in real estate agencies and brokers. Employment in insurance agencies declined slightly.

Transportation, communication, and utilities gained 2,400. Seventeen hundred of the increment was in telephone communication; it occurred because of the expansion of several types of operations within the industry, including new billing centers. Transportation and utilities posted small gains that were well-scattered within the industries.

Construction employment dropped 3,300, almost entirely in general building. This situation is attributed to the slowdown in the construction of single-family residences, which stems partly from the fact that the cost of a house has driven many families out of the market and partly from the beginnings of a general slowdown. Special trades contracting declined by 600, and heavy building rose by 800 from last year.

New Developments

Continued from page 1

spokesman, Shaw will begin installation of yarn-making equipment and recruitment of personnel almost immediately. They expect to be operational within two to three months. Although initial employment will be relatively small, they expect that the plant will eventually have 500 employees.

The American Cancer Society will move its national headquarters to Atlanta from New York within the next two years, it was decided recently. The board of directors of the society, the world's largest volunteer health agency voted 74 to 16 to build a 155,000-square-foot building adjacent to Emory University and across the road from the U.S. Center for Disease Control. The decision to move the prestigious agency was based largely on cost factors. Its present Manhattan location was deemed too expensive as were other sites in the New York area. Emory University and the Robert W. Woodruff foundation are donating 4.5 acres of land for the building and will contribute $1 million toward the agency's moving expenses. The society has 300 paid staff. It is not known at this time how many of them will transfer to the new location.

A $45 million office-hotel complex will be built in Morrow at the intersection of Interstate 75 and Jonesboro Road. Beazer Properties, Inc. plans to erect six buildings on the 33-acre site and hopes to attract a major hotel chain to the development. To alleviate traffic congestion on the already heavily traveled streets in the area, the Department of Transportation has approved construction of a new bridge over I-75 which will parallel the existing bridge on Jonesboro Road.

NOTE These preliminary estimates were prepared in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics, based upon monthly reports submitted by selected employers in the Savannah MSA, which includes Chatham and Effingham counties. The estimates include all full- and part-time wage and salary workers who were employed during or received pay for any part of the pay period that includes the twelfth of the month. Proprietors, domestic servants, self-employed persons, unpaid family workers, and personnel of the armed forces are excluded. Estimates based on 1986 benchmark. Totals may not add because of rounding.

** Industry division does not meet disclosure criteria.*
